ABOUT ME

Recent BSc Computing graduate with hands-on experience in accurate data collection, validation, cleaning, and reporting using electronic tools. Currently working as a Software Engineer at Hytel where I develop and implement features focused on data validation, real-time data processing, and reporting using Flutter, React, tRPC, Firebase, and Google Cloud. Detail-oriented and analytical, with a proven ability to identify inconsistencies, ensure data accuracy under pressure, and compile clear reports. Eager to apply my technical and analytical skills to support data analytics initiatives, risk-based auditing, assignment planning, and the preparation of concise reports for the Audit & Risk Directorate.

EDUCATION

David Kaunda Secondary Technical School, Lusaka, Zambia

Grade 12 Certificate

ZCAS University, Lusaka, Zambia

Bachelor of Science in Computing with Business Completed 2025 (Final results released January 2026; Graduation ceremony scheduled this year)

WORK EXPERIENCE

Software Engineer Hytel – 2026 March - Present

- Developing and maintaining full-stack applications using **Flutter** for cross-platform mobile development and React for web/frontend components.
- Implementing robust backend integrations with tRPC, Firebase, and Google Cloud services for authentication, real-time data, storage, and cloud infrastructure.
- Building and optimizing features such as user authentication, data validation, payment tracking, reporting modules, and real-time functionality.
- Applying clean architecture, state management, and best practices learned from the Kulima Tower Levy App project into production environments.
- Collaborating with the development team on code reviews, debugging, and delivering high-quality, scalable solutions under tight deadlines.

Enumerator Zambia Statistics Agency (ZamStats) – Census Preparations 2021

- Collected household data using CSPro electronic tool during segment listing and mapping.
- Reviewed and cleaned data daily to catch errors (e.g., wrong names or inconsistencies) before submission.
- Fixed issues on-site by verifying with respondents and updating entries to keep records accurate.
- Maintained confidentiality and met daily targets in varied locations.

Enumerator Ministry of Health – ZAMPHIA Project September 2023 – October 2023

- Conducted health surveys with electronic questionnaires (CSPro CAPI), ensuring precise and complete data.
- Troubleshot tablet and tool problems in the field to avoid delays.
- Interacted professionally with respondents and submitted validated data on time.
- Handled busy schedules and changing conditions while keeping quality high.

Ai Data Specialist – Yenda November 2025 – March 2026

- Data Annotation & Labeling: Organizing, tagging, and structuring datasets (text, images, and video) to make them usable for machine learning
- Data Preprocessing: Cleaning, organizing, and preparing multi-source datasets for intelligent analysis.
- Computer Vision: Managing and tagging visual and image datasets.

SKILLS

• Data Analytics & Management: Data collection, validation, cleaning, inconsistency detection, report compilation, and preparation of working papers
• Technical: CSPro (CAPI), Flutter & Dart, React, tRPC, Firebase, Google Cloud Platform, Microsoft Excel (data analysis & reporting), Git
• Analytical & Audit Support: Identifying issues and anomalies, problem-solving, systematic data analysis, risk awareness through accurate data handling, documentation skills
• Soft Skills: Excellent written and verbal communication, interviewing and survey techniques, teamwork, working under pressure, time management, building professional relationships
• Other: Quick learner of new technologies and tools, strong attention to detail, professional report writing
• Problem-Solving: Good at identifying issues and resolving them on the spot.
• Team Player: Works well with others and independently.
• Time Management & Pressure Handling: Delivers under tight deadlines and changing requirements.

PROJECTS

Kulima Tower Levy App (Final Year Project)

- Developed a mobile app using Flutter for managing market levy collection at Kulima Tower (Lusaka).
- Features included user authentication, levy registration, payment tracking, reporting, and basic data validation to ensure accurate daily collections.
- Built cross-platform (Android/iOS) with clean UI, state management, and local storage for offline use.
- Pushed complete source code to personal GitHub repository for version control and collaboration.
- [Nchimunya97/Kulima_tower_levy_app: final year project]

GymGenius – Fitness Tracking Application

- Developed a full-stack workout tracking app using a Turborepo monorepo architecture.
- Built real-time progress monitoring, comprehensive workout logging (sets, reps, weights), analytics dashboards, and custom routine management.
- Implemented type-safe APIs with tRPC, shared Zod schemas, React + TypeScript frontend (Vite + Tailwind + Shadcn/UI), and Firebase backend. Set up modern development practices including CI/CD pipelines, Husky hooks, ESLint, Prettier, and testing frameworks.
- GitHub: Nchimunya97/GymGenius

Decentralized Document Verification System

- Created a blockchain-based document verification platform using Ethereum smart contracts.
- Implemented secure document registration, NRC-based identity verification, immutable storage, and status tracking (Pending/Verified/Rejected).
- Developed the frontend with React and integrated it with the blockchain backend via Ethers.js and MetaMask wallet authentication.
- Technologies: Solidity, Hardhat, Ganache, React, JavaScript.
- GitHub: Nchimunya97/decentralized-document-verification
